Gender Equality and Nutrition

In their 2018 “State of the World” report, the United Nations notes that, “Gender inequality remains one of the greatest and most persistent challenges to our goals for global development.” The report highlights that although progress has been made on reducing gender disparities in education and health, women still face significant barriers to full participation in economic, social and political life. Gender equality is a fundamental human right, which means that all people, regardless of sex or gender identity, have the same opportunities and freedoms.

Nutrition International is committed to gender equality because we believe that empowering women and girls is key to achieving our mission to nourish life. By ensuring that girls have access to nutrition, education, healthcare and financial resources, we can help them to reach their full potential. At the same time, we recognize the importance of involving men and boys in our efforts to address gender inequality. By working together, we can create a world where every person has access to the resources they need to thrive.

A new chapter in Nutrition International’s development

In 2017, Nutrition International launched its 2018-2024 Strategic Plan, which sets forth a vision for the future of our organization. The plan outlines our goals and priorities for the next seven years, and it is guided by a commitment to evidence-based programming and a focus on achieving the greatest impact possible. We believe that this approach will enable us to make a lasting impact in the lives of people around the world.

In 2018, Nutrition International delivered impact through coverage by implementing low-cost, high-impact interventions; leveraging established programs; and supporting evidence generation. Our strategy was to focus on low-cost, high-impact interventions that can be scaled up to reach millions of people. We also leveraged our existing programs to maximize their impact, and we worked with partners to conduct evidence generation to inform our programming.

Nutrition International values the expertise of our partners, who enable us to conduct programs in a variety of locations. Our partnerships are built on a foundation of trust, and we value the contributions of our partners as we work together to achieve our mission.

In the past fiscal year, Nutrition International delivered impact through coverage by implementing low-cost, high-impact interventions; leveraging established programs; and supporting evidence generation. Our strategy was to focus on low-cost, high-impact interventions that can be scaled up to reach millions of people. We also leveraged our existing programs to maximize their impact, and we worked with partners to conduct evidence generation to inform our programming.
